# CYBERSECURITY LEADERSHIP: EMPOWERING ORGANIZATIONS IN A HYBRID WORLD

## BIOGRAPHY

He is a founder and CEO, Cyber Guardians, Author, Philippines National Cyber Security Plan 2022  
He has 19 years of experience in ICT and Cyber Security, and Advocate of Anti-Online Sexual Abuse and Exploitation of Children

## ABSTRACT

In this talk, he will highlight the increasing cyber threats that industries, banking, the health sector, and the government face due to poor cyber hygiene activities, outdated infrastructure, inadequate information sharing, and the complacency of people handling data. The COVID-19 pandemic has further complicated the cyber threat landscape, and the government needs to adapt by providing solutions that involve community participation. Cybercriminals are well-organized and work together to cause disruption and gain economically and politically. The government's reactive approach to cybersecurity and lack of information sharing fail to achieve networked cybersecurity governance. Strong leadership and governance that institutionalize information sharing among stakeholders are needed to achieve a cybersafe and cyberresilient nation in the 21st century.
