LU Talk (April)

Language Understanding $\lambda(\mu)$ **Lab**oratory

Date: 28 April 2025 (Monday)
Time: 11:00 to 14:00 (ICT time)

Toward truly-autonomous distributed computing environment

Hidehiro Kanemitsu,

Associate Professor,
Division of Information,
Global Education Center,
Waseda University, Japan.

Hidehiro Kanemitsu received a B.S. degree in Science from Waseda University, Japan and M.S. and D.S. degrees in Global Information and Telecommunication Studies from Waseda University, Japan. His research interests include parallel and distributed computing, grid, peer-to-peer computing, and web service technology. He is currently an associate professor at the Global Education Center, Waseda University, Japan. He is a member of the IEEE.

Abstract:

In this presentation, I will give the introduction to distributed computing and its involved technologies building the basics for it. In particular, virtualization technology such as cloud computing, peer-to-peer network for IPFS (InterPlanetary File System), ICN(Information-Centric Networking), and Task scheduling algorithms. Then I introduce cross-sectional researches such as task scheduling using ICN/IPFS for autonomous parallel and distributed processing. Then discussion regarding what is the autonomous computing will be provided.
