

TRANSITION FROM ACADEMIC TO BUSINESS LIFE

Many students wonder how academic knowledge translates into real-world careers beyond the university. In this invited talk, Dr. Vu Truong Thanh shares his personal journey from academic research and university teaching to consulting and senior management roles in a multinational corporation. Through real examples, the talk highlights key differences between academic and business problem-solving, and explains how research-based thinking can still create strong value in industry. The Vietnamese education system is discussed to help students better understand their own strengths and challenges when entering the workforce. Emphasis is placed on the importance of multidisciplinary skills, illustrated by the invention of the blue-light LED and current industrial research on energy storage systems. The talk concludes by discussing how artificial intelligence is reshaping learning and careers, and how students can strategically prepare themselves for an uncertain but opportunity-rich future.

Dr. Vu Truong Thanh is a Senior Manager at Toshiba Asia Pacific Pte. Ltd. and Regional General Director of Toshiba Elevator Vietnam Co. He received his Bachelor's degree from Hanoi University of Science and Technology and his Master's and PhD in IT and Networking from Waseda University, Japan. His career spans academic research and teaching, ICT consulting, and over a decade of leadership in industry. His interests include multidisciplinary innovation, education-industry linkage, and battery energy storage systems using recycled batteries.

Dr. Vu Truong Thanh
